HELLO

I'm a passionate frontend web developer specializing in the React ecosystem with an ability to keep my sights on the big picture, the tiny details, and the relationships between them. The most important thing to me in my next role is joining a team that is enthusiastic, collaborative, and empathetic.

EXPERIENCE

Web Developer (Contract), LiveCoinWatch; Remote — 2026

Frontend developer on the next.js React webapp. Primarily focused on improving codebase quality, refactoring, various modernizations, and finding/fixing bugs.

Staff Engineer, Routable; Remote — 2019-2021 & 2022-2024

Frontend development on the React/Typescript webapp. Tech lead. Member of power-users and business automation pods (high volume payments, enterprise features, performance focused). Frontend lead on cross-functional projects with heavy collaboration across teams. Technical interview team.

Fullstack Developer, Doppler; Remote — 2021-2022

Responsible for feature development across the stack (TS, React, Node, Express, PostgreSQL), including the user group management dashboard and pull requests between configs of code secrets. Converted a large portion of the codebase from JS to TS. Participated in new feature ideation and planning. UX/UI design tasks as needed.

Software Developer, Medean; Chicago, IL — 2017-2019

Fullstack: Principal role in developing the React/Redux web app. General backend Node development, with focus on the Express + websocket APIs, authentication service, and overall application security measures. Mobile engineer: Principal role in developing the React Native application. Founding team member.

Web & iOS Developer, Application Visions; Chicago, IL — 2016-2017

Web and iOS app developer on a small, highly collaborative team building a realtime app for web (user media, payments, interactive design tools; React, Node/Express) and iPad (companion photo app; Swift, Realm).

EDUCATION

Columbia College Chicago — BA Mobile Media Programming, 2016
